

**Chair of
Sustainable Electric Networks
and Sources of Energy**

**Renewable Energy and Electromobility
for Smart Grids**

9. Deutsch-Japanisches Umwelt- und Energiedialogforum

**Professor Dr.-Ing. Kai Strunz
TU Berlin, Germany**

19 April 2018, Berlin

Overview

- 1. Introduction**
- 2. Electric Vehicle Integration**
- 3. Electric Transport Perspective in Berlin**
- 4. Wrap-Up**

Professor Dr.-Ing. Kai Strunz
www.sense.tu-berlin.de

9. Dt.-Japan. Forum
Berlin, 19.-20. April 2018

2

1. Introduction: Driving Forces Behind Energy and Mobility Transition

Environment

Reducing emissions

Economy

Protecting against high cost of commodities

Independence

Reducing reliance on imports of fossil resources

Agreements

Honoring climate change accords

Professor Dr.-Ing. Kai Strunz
www.sense.tu-berlin.de

9. Dt.-Japan. Forum
Berlin, 19.-20. April 2018

3

1. Introduction: German "Energiewende"

conventional (past)

renewable (future)

Energy and Mobility
Transition

2000

2015

2030

2050

Passing of EEG

Renewable electric energy share: ~6 %

Renewable electric energy share: ~30 %

Goal for RES: ~50 % share of electric energy

Goal for RES: ~80 % share of electric energy

Adoption of Renewable Energy Sources Act (EEG) aims to encourage the development of renewable energy sources (RES) and its share in the gross energy demand in Germany.

Professor Dr.-Ing. Kai Strunz
www.sense.tu-berlin.de

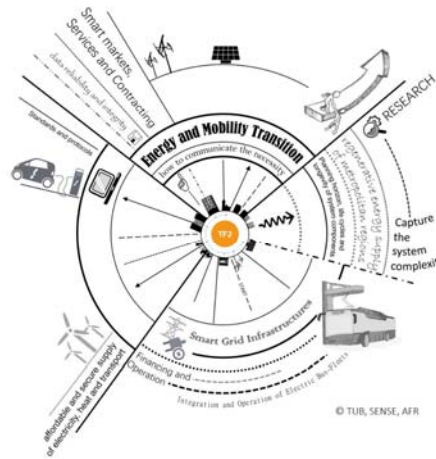

9. Dt.-Japan. Forum
Berlin, 19.-20. April 2018

4

1. Introduction: Infrastructure Challenges to Energy and Mobility Transition

- Financing and operation of a future network and charging infrastructure
- Standardization of charging technology
- Smart grid solutions for individual EVs and fleets
- Flexible data availability and interoperable IT infrastructures

Professor Dr.-Ing. Kai Strunz
www.sense.tu-berlin.de

9. Dt.-Japan. Forum
Berlin, 19.-20. April 2018

5

2. Electric Vehicle Integration: Energy Needs

Private EVs (pEVs) in Germany

- ~45 M cars in Germany, forecast ~3 M pEVs in 2025
- Average pEV usage: 13,800 km/ year
=> 17 kWh/ 100 km => 2,330 kWh/ year
- 45 M pEVs: 105 TWh
=> ~16 % of produced electric energy in Germany
- 3 M pEVs: 7 TWh
=> ~1 % of produced electric energy in Germany

Charging Locations

- On the countryside or in city?

- At home, the working place or the shopping mall?
- What is the role of the supplier-aggregator (SupAg)?

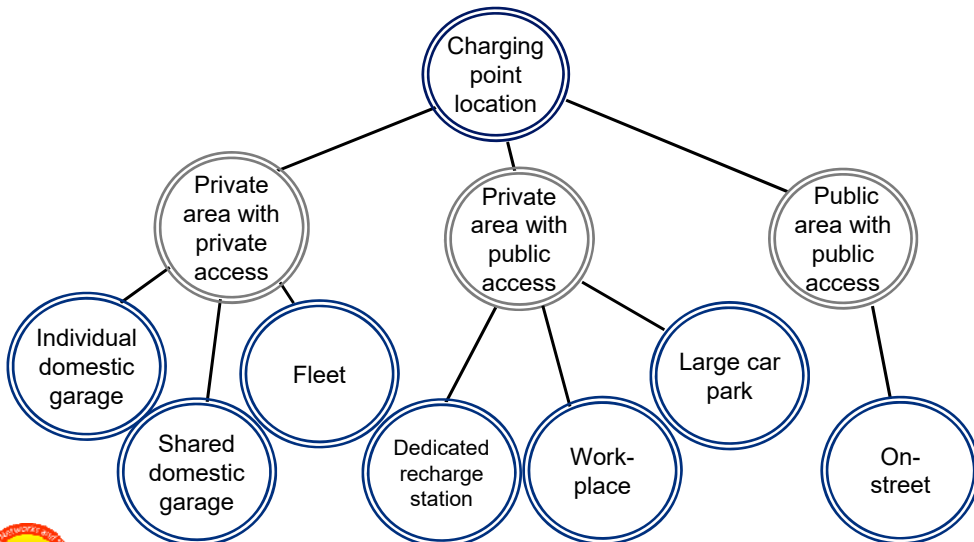

Professor Dr.-Ing. Kai Strunz
www.sense.tu-berlin.de

9. Dt.-Japan. Forum
Berlin, 19.-20. April 2018

6

2. Electric Vehicle Integration: Charging Points

Professor Dr.-Ing. Kai Strunz
www.sense.tu-berlin.de

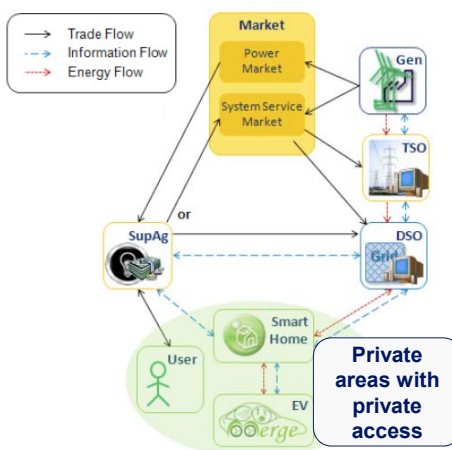

9. Dt.-Japan. Forum
Berlin, 19.-20. April 2018

7

2. Electric Vehicle Integration: Charging Strategies in Private Area with Private Access

- Smart Home can offer Charging Point (CP) in private area with private access equipped with smart meter
- User can read the metering data and specify charging preferences
- Based on the agreement with the users, the SupAg can offer services to the market
- Distribution System Operator (DSO) can turn EVs on/off in emergency cases through their smart meter

Professor Dr.-Ing. Kai Strunz
www.sense.tu-berlin.de

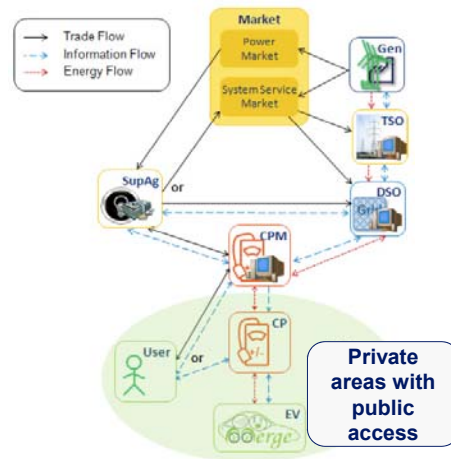

9. Dt.-Japan. Forum
Berlin, 19.-20. April 2018

8

2. Electric Vehicle Integration: Charging Strategies in Private Area with Public Access

- Charging Point Manager (CPM) buys the power through the SupAg from the market
- CPM specifies charging conditions
- DSO has access in case of emergencies

2. Electric Vehicle Integration: Tariffs

Charging tariffs for electric vehicles should offer various options:

- **Base tariff** – offers simplicity without flexibility
- **Flex tariff** – provides a more efficient usage of the resources available and enabling the application of optimized power scheduling
- **V2G tariff** – aims to exploit the most advanced usage of electric vehicle flexibility including vehicle-to-grid services

2. Electric Vehicle Integration: Charging of Fleets Through Virtual Power Plants (VPPs)

- VPP is a form of Supplier-Aggregator specialized in offering services to a portfolio of resources including EVs
- Integration of electric vehicle fleets in the Virtual Power Plant (VPP) portfolio to obtain optimal charging schedules and energy market participation

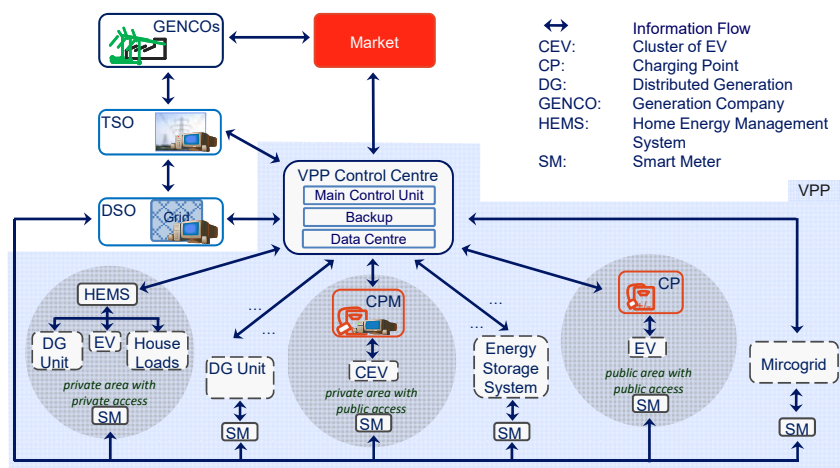

Professor Dr.-Ing. Kai Strunz

18

3. Electric Transport Perspective in Berlin: Scenarios of Energy Demand and Storage Capacity

Depot

- 262 buses at Indira-Ghandi-Straße, (forecast ~80 ebuses in 2025)
- Average bus usage: 63,000 km/ year => 220 kWh/ 100 km => 138.60 MWh/ year
- **262 buses:** 36.3 GWh => ~0.25 % of used electric energy in Berlin
- **80 buses:** 11.1 GWh => ~0.08 % of used electric energy in Berlin

Storage Capacity

- Average storage capacity per Bus: 200 kWh

- Depot (**262 buses**): 52.4 MWh
- Berlin (**1,330 buses**): 266 MWh

Berlin

- 1,330 buses of BVG-fleet, (forecast ~130 ebuses in 2025)
- Average bus usage: 63,000 km/ year => 220 kWh/ 100 km => 138.60 MWh/ year
- **1,330 buses:** 184.3 GWh => ~1.27 % of used electric energy in Berlin

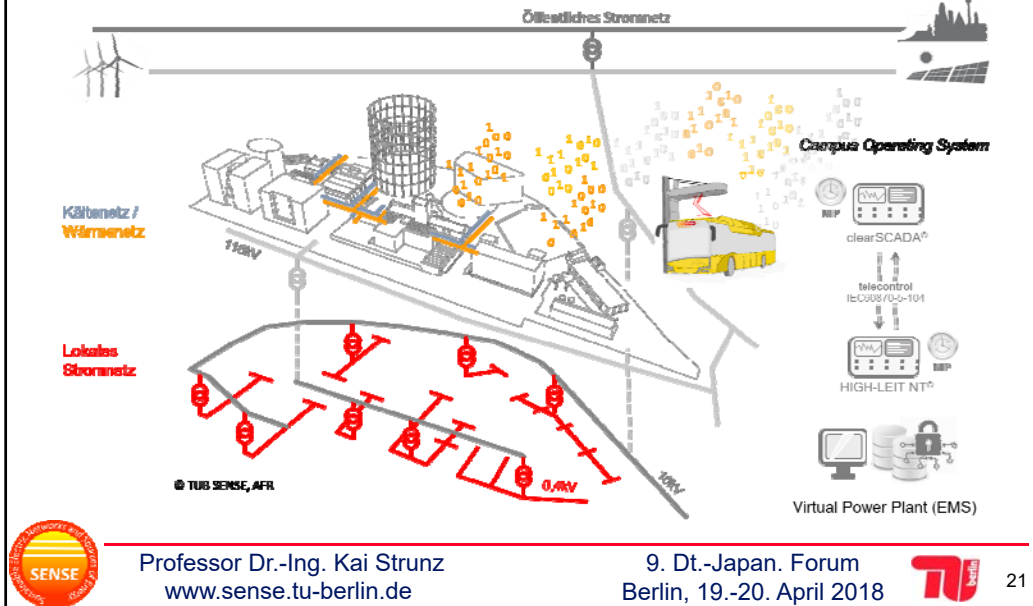

3. Electric Transport Perspective in Berlin: Opening of First Bidirectional Charging Station for Buses on April 12th, 2018

- Grand opening and inauguration of Berlin's new charging station
- Integration into the smart grid on the EUREF-Campus demonstrates contributions to a future smart energy supply

3. Electric Transport Perspective in Berlin: Integration of First Bidirectional Charging Station for Buses

3. Electric Transport Perspective in Berlin: Fully Electrified Bus Line 204 Between Südkreuz and Zoo

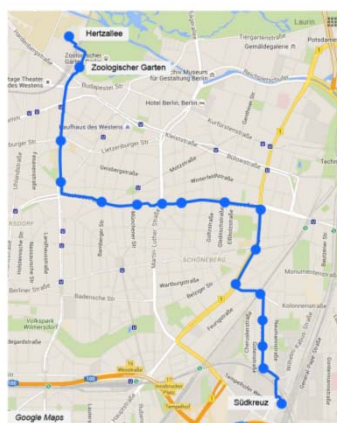

Fig.: Track-Layout of BVG Line 204. Circles represent bus stops.

Fig.: Drive (top) and stop (bottom) times of BVG Line 204.

4. Wrap-Up

- **Establish a network and mobility development plan** for rural and metropolitan areas taking into consideration the provision of sufficient charging infrastructure
- **Advance standardization** for the integration of electric vehicles including new technologies such as battery swapping
- **Smart use of existing infrastructure**, allowing competition with existing and future technologies
- **Shape the transformation process of the energy and transport sector** with long-term objectives spanning multiple legislative periods
