

The images are created and edited by entering the project name into the generating AI (Canva AI).It does not represent the actual projects so please refer to the webpage for details via the QR code.

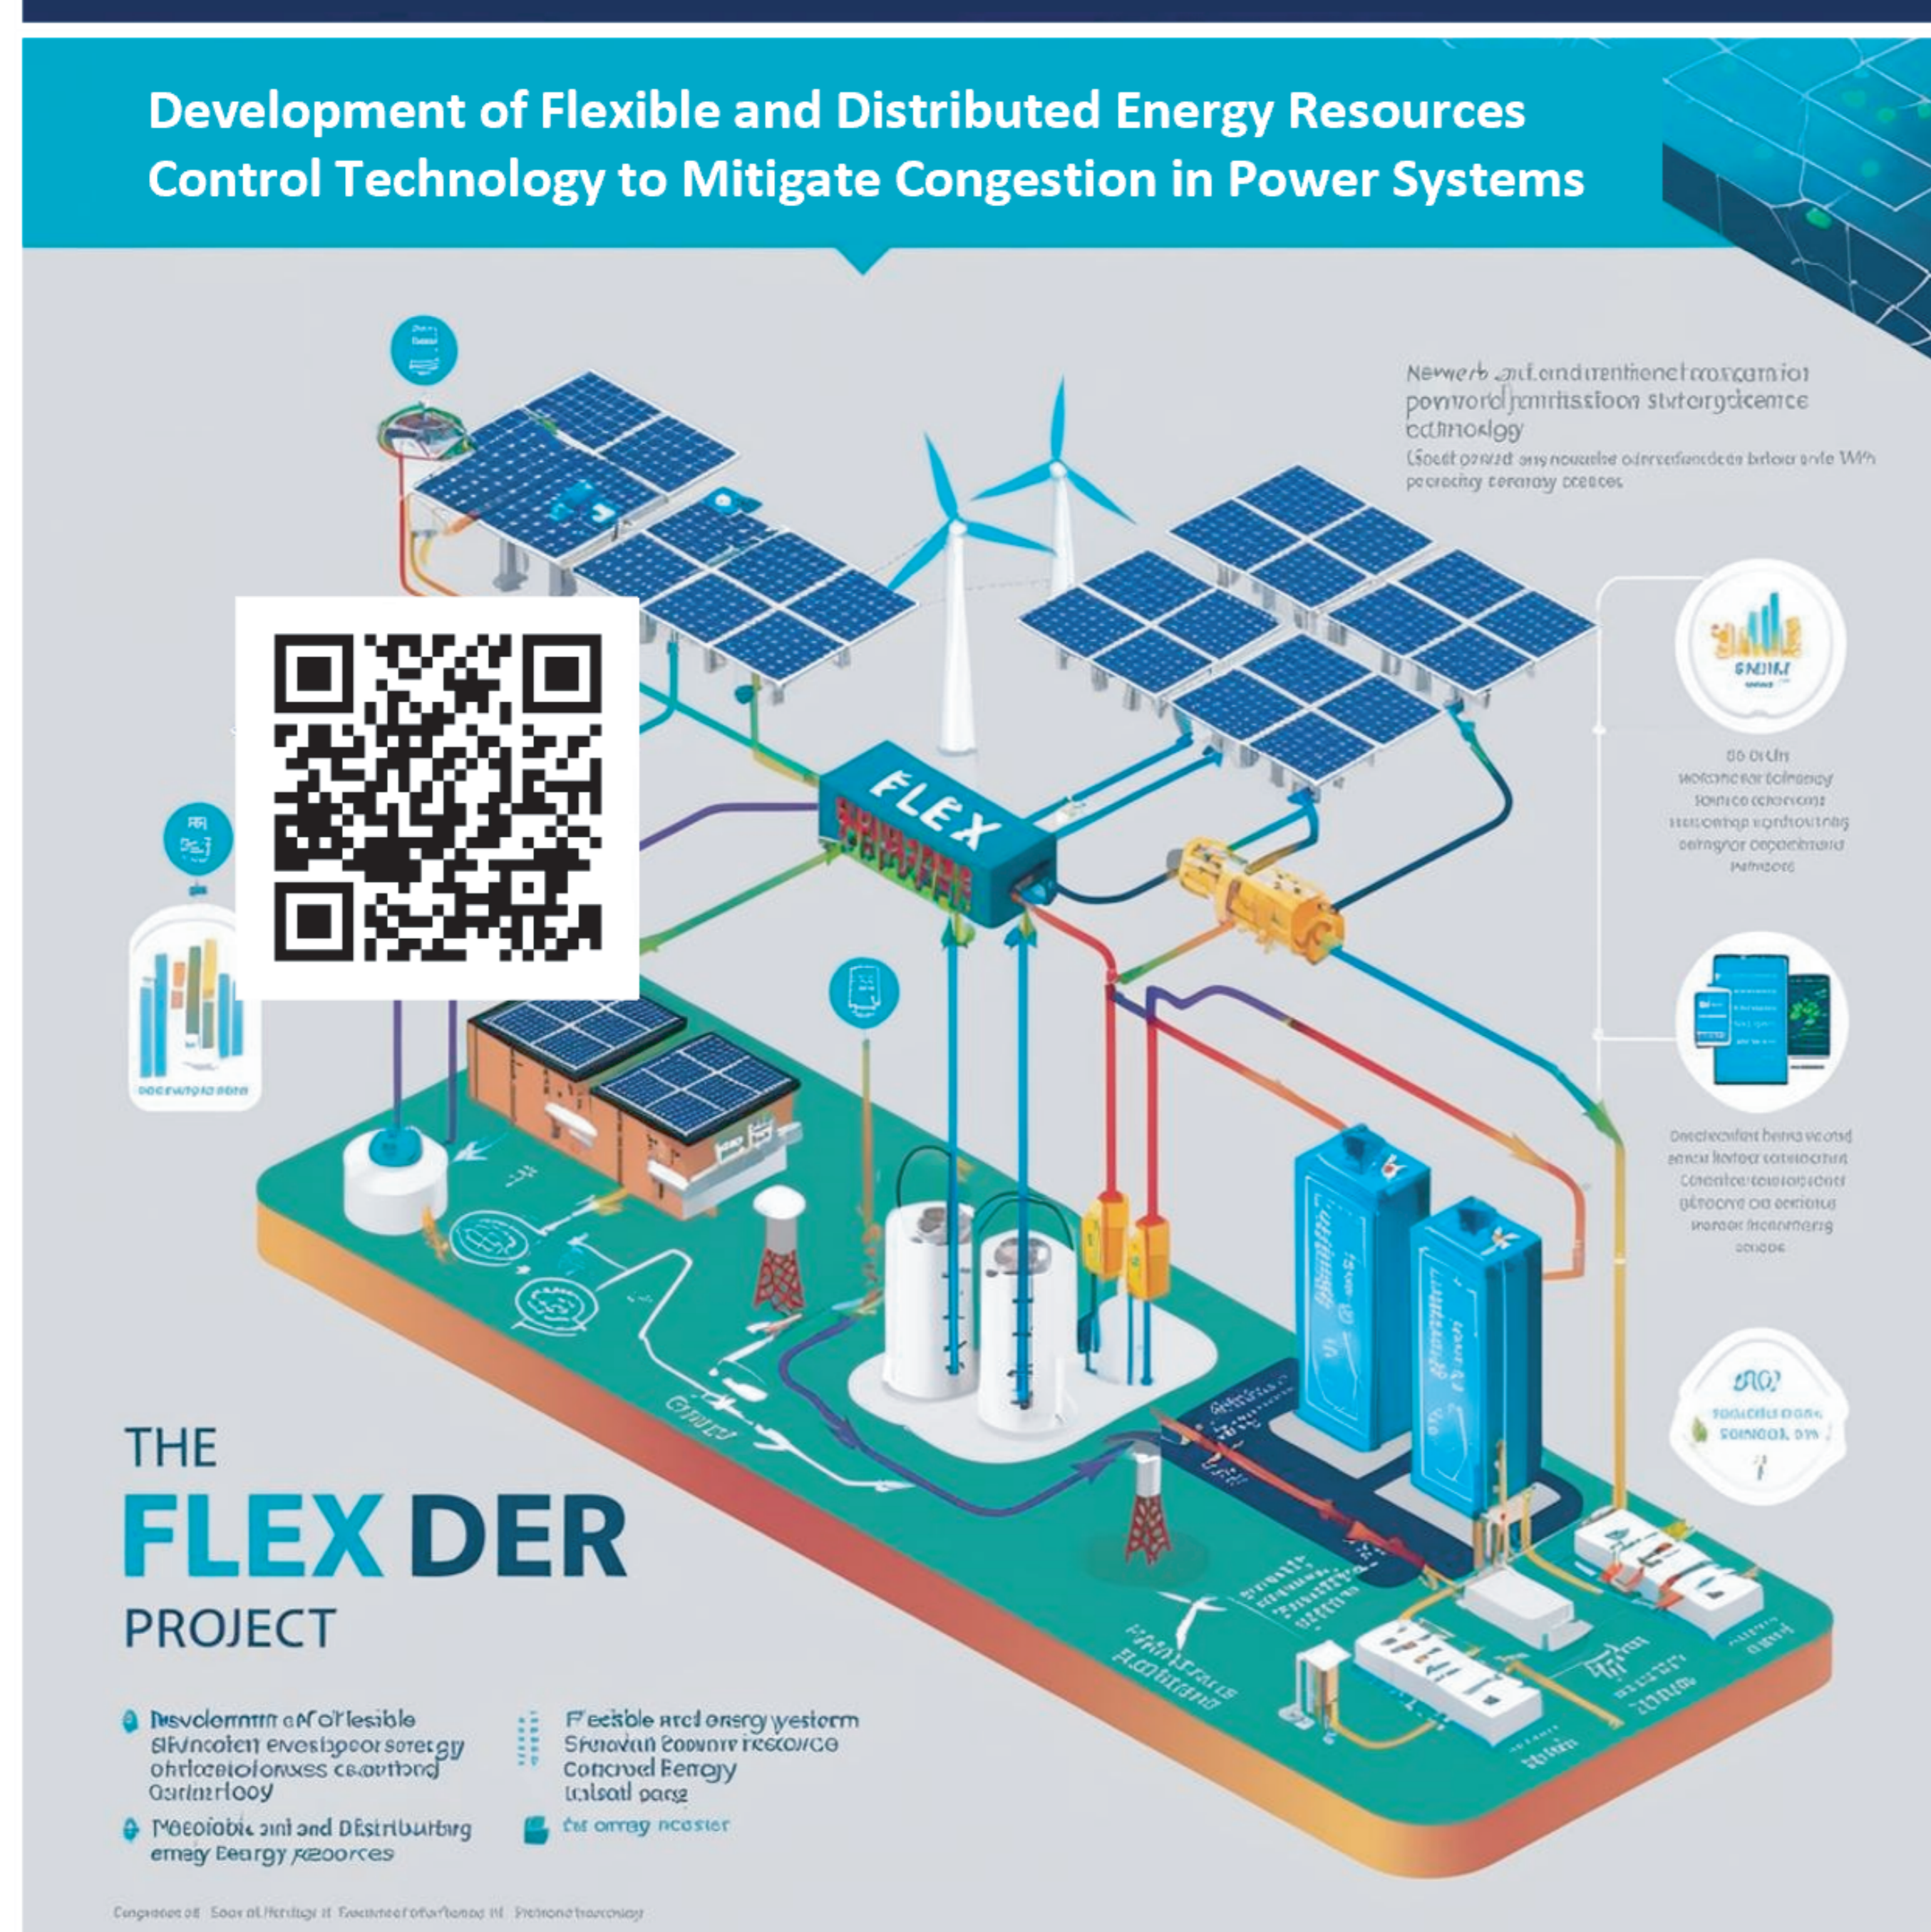

Research and Development of a Multi-purpose and Multi-terminal HIGH Voltage Direct Current Transmission System (RIGHT Project)

Future-generation Power Network Stabilization Technology Development for Utilization of Renewable Energy As the Major Power Source (STREAM Project)

Development of Flexible and Distributed Energy Resources Control Technology to Mitigate Congestion in Power Systems

Technology Development to Ensure Flexibility and Optimize Power Grids for Integration Cost Reduction

NEDO Connect & Manage 2.0

Development of Flexible and Distributed Energy Resources Control Technology to Mitigate Congestion in Power Systems (FLEX DER project)

Technology Development to Ensure Flexibility and Optimize Power Grids for Integration Cost Reduction (NEDO Connect & Manage 2.0)
