○ Business Plan

Cardiac rehabilitation has been shown to be highly effective for patients with cardiovascular disease; however, participation and long-term adherence rates remain extremely low both in Japan and internationally. To address this challenge, we will conduct research and develop a cardiac rehabilitation software as a medical device that achieves both high usability and efficacy and safety.

○ Research Outline

We will promote a confirmatory clinical trial and global expansion of the cardiac rehabilitation software as a medical device. In parallel, we will develop a remote cardiac rehabilitation platform and conduct research and development of additional functionalities.

Business Area/Field	Research Period	Research Grant Amount	International collaborative technology demonstration
Healthcare	PCA 2025~2028FY	JPY 961 million	United States

○International collaborative technology demonstration

Contract with local partners

To promote global expansion, we will conduct collaborative research with overseas research institutions.
