

## Development of an Innovative Stent Graft System for Aortic Aneurysms in the Arch (RIBS Inc.)

○Business Plan

Our mission is the global dissemination of the RIBS procedure, an innovative treatment for thoracic aortic aneurysms, and we aim to commercialize a dedicated stent graft system for this procedure.

○Research Outline

Our ultimate goal is to develop and commercialize a dedicated device for the RIBS procedure—an innovative stent graft implantation technique for aortic aneurysms—enabling minimally invasive curative treatment for diverse anatomical challenges that were difficult with existing therapies. Specifically, during the STS phase, we aim to refine prototype development and establish a roadmap for transitioning to system-level product design.

City	Year of Establishment	Founder
Tokyo	2025	Takao Ohki

Business Area/Field	Research Period	Research Grant Amount	International collaborative technology demonstration
Healthcare	STS 2025-2027FY	JPY 499 million	United States

Partner VC	Latest round of Fundraising	Valuation
DIAMOND MEDINO CAPITAL Inc.	Non-Disclosure	Non-Disclosure

○International collaborative technology demonstration

-Supply chain development

During the STS phase, no overseas technical verification (including R&D) will be conducted under this grant program. However, in preparation for future international expansion, non-clinical trials are planned to be conducted at overseas facilities that meet regulatory standards compliant with global regulations.
